To Whom It May Concern:

The Specialty Graphic Imaging Association (SGIA) represents the screen printing and digital imaging industry and its supplier base. SGIA submits the following comments in response to the Volatile Organic Compound Workgroup recommendations.

SGIA was originally concerned with potential control measures for the category of Graphic Arts. This category does not have a White Paper issued for it, but we are concerned with possible inclusion of our members in the category of VOC006-Industrial Surface Coatings.

Upon review of this category's White Paper from May 22, 2006, SGIA's concern is with the source type of Paper and Other Web Coatings. SGIA requests that in its regulations NJDEP follow and keep current USEPA MACT exemptions for this source type. SGIA urges NJDEP to apply USEPA's current standard, recognizing USEPA's language and adopting its amendments, for MACT Subpart KK, Printing and Publishing Industry. We believe it is imperative for NJDEP to ensure that the applicability of its standard mirror federal regulations.

Thank you for the extended opportunity to provide comments on these recommendations. Please do not hesitate to contact me if you have any questions.

Sincerely,

A handwritten signature in black ink that reads "Marcia Y. Kinter". The signature is written in a cursive, flowing style.

Marcia Y. Kinter
